AOS 9800 transmission is a fully automatic/powershift transmission available with 8 forward speeds and is operated with automatic controls suitable for oil field applications including drilling rigs, workover rigs, mud pumps, cementing units, the company said in a release.

Commenting on the launch Neeraj Jain, MD & CEO, **AVTEC Limited** said, "We are committed to delivering an array of advanced products to our customers and setting benchmarks in reliability for the off-highway industry."

He further added," Our new product has indigenously developed electronically controlled transmissions that provides data controlled mechanism for enhanced system efficiency. We are confident that this new product will help us tap into the huge potential of the Indian as well as global mining and oil field market."

Available with optional engine driven PTO, AOS 9800 offers a flexibility of mounting either direct or remote and using in-line arrangement and hydrodynamic retarder. This transmission is supplied with **HATS** (Hauling Automatic Transmission System) which is developed as the resultant of AVTEC's in-house research of over three years at its Tech Centre at Hosur.

HATS **electronic control system** has been designed to be integrated with transmissions catering to mining, oil field, and the construction industry.

HATS is equipped with features like GPS and can be integrated with telematics for data transfer and easy trouble shooting in the field which is a prerequisite for many OEMs.

The company claims that AOS9800 transmission is designed to handle the most severe operating conditions and provides relentless performance in the most demanding oil field applications.
