
AVTEC launches new range of HD transmissions

Powertrain and precision-engineered products manufacturer AVTEC has launched its new range of HD transmissions – AOS 9800, delivering customised transmission solution up to 3300hp output for Oil Field applications. The AOS 9800 transmission is a fully automatic/powershift transmission available with eight forward speeds and is operated with automatic controls suitable for Oil Field applications like drilling rigs, workover rigs, mud pumps, cementing units, etc.

Neeraj Jain, MD & CEO, AVTEC Limited said, “We are committed to delivering an array of advanced products to our customers and setting benchmarks in reliability for the off-highway industry. Our new product has indigenously developed electronically controlled transmissions that provide data controlled mechanism for enhanced system efficiency. We are confident that this new product will help us tap into the huge potential of the Indian as well as global mining and oil field market.”

Available with optional engine driven PTO, AOS 9800 offers the flexibility of mounting either direct or remote and using in-line arrangement and hydrodynamic retarder. This transmission is supplied with HATS (Hauling Automatic Transmission System) which is developed as the resultant of AVTEC’s in-house research of over three years at its Tech Centre at Hosur.

HATS electronic control system has been designed to be integrated with transmissions catering to mining, oil field, and the construction industry. HATS is equipped with features like GPS and can be integrated with telematics for data transfer and easy troubleshooting in the field which is a prerequisite for many OEMs. AVTEC’s AOS9800

transmission is designed to handle the most severe operating conditions and provides relentless performance in the most demanding oil field applications.
